## SUMMARY

Information Technology graduate with a strong foundation in Artificial Intelligence, Machine Learning, Generative AI, and data-driven solution development. Proficient in Python, SQL, and modern AI frameworks, with hands-on experience in developing AI-powered applications, implementing machine learning models, and building interactive dashboards. Skilled in transforming complex data into actionable insights to drive business optimization and data-driven decision-making. Strong analytical, problem-solving, and collaboration skills with a passion for building scalable AI solutions and automating workflows.

## EDUCATION

## PROJECTS

<

- Designed a hybrid AI orchestration framework integrating intent classification, SQL generation, deterministic query validation, knowledge retrieval, and insight synthesis, achieving **<2.5 s average response latency** for analytical queries.
- Built a scalable AWS architecture using Lambda, Fargate, API Gateway, Cognito, RDS Read Replica, OpenSearch, DynamoDB, Redis, and S3 metric registry, supporting **1M+ metric records** with **99.9% service availability** by design.

#### **GoHunt – AI-Powered Hunting Data Assistant** | *Python, FastAPI, AWS Bedrock, LangChain, PostgreSQL, OpenSearch*

- Designed and deployed an AI-powered conversational assistant using AWS Bedrock, LangChain, and Retrieval-Augmented Generation (RAG), enabling natural language querying over **50K+ PostgreSQL records** and regulatory documents.
- Designed a hybrid retrieval architecture integrating PostgreSQL SQL queries, OpenSearch vector search, and Selenium-based automated data ingestion with semantic embeddings, improving retrieval relevance to **90%+ top-5 recall** while maintaining **<2 s retrieval latency**.
- Deployed the application on AWS EC2 and integrated LangSmith and Langfuse for end-to-end LLM observability, prompt tracing, and debugging, reducing issue diagnosis time by **40%** during development.

#### **ISRO Autonomous Navigation Aerial Vehicle (ANAV)** | *LiDAR, Optical Flow, SLAM, Pixhawk, Edge Hardware*

- Team **AVIONIX** – ISRO IROC-U 2025
- Secured **INR 98,000** university research grant to develop an autonomous **UAV** for GPS-denied environments, leading cross-functional hardware-software integration.
- Implemented real-time sensor fusion using **LiDAR** and Optical Flow alongside **SLAM** algorithms for onboard mapping, localization, and autonomous navigation.
- Architected fault-tolerant, resource-efficient software systems for real-time deployment on edge hardware under constrained computational conditions.

#### **CHARUSAT Education Expo Dashboard** | *Power BI, SQL*

- Launched a comprehensive Power BI dashboard for **CHARUSAT Expo 2025**, visualizing key event metrics and delivering actionable insights for 10,000+ attendees.
- Built optimized SQL data pipelines to process 1,500+ records, supporting 15+ drill-down charts and 10 interactive filters for dynamic reporting.

#### **CVision – AI-Powered Smart Resume Analyzer** | *React.js, Node.js, OpenRouter (GPT-4), Supabase, PostgreSQL, Firebase, Vercel*

- Developed a full-stack AI-powered resume analysis platform integrating GPT-4 via OpenRouter to perform intelligent resume evaluation, ATS optimization, keyword matching, skill-gap detection, and personalized career recommendations against target job descriptions.
- Built a scalable serverless architecture using React, Node.js, Supabase PostgreSQL, Firebase Authentication, and Vercel Functions to support secure resume processing, analysis history, real-time dashboards, and persistent user profiles.

#### **CodeSafe – AI-Powered Code Vulnerability Detection** | *React, Node.js, TypeScript, Python*

- Delivered a full-stack AI-powered code vulnerability scanner using React, Node.js, and TypeScript, achieving 70% faster analysis than traditional SAST tools with 5-level severity classification.
- Integrated LLM-based code analysis APIs, improving detection accuracy by 17% and reducing false positives by 60% for secure code validation.

#### **Similarity Hashing Algorithm** | *Python, Flask, SSDEEP, MFCC, SSIM*

- Built a full-stack multimedia file comparison tool using Python and Flask, achieving 90–95% accuracy across text, audio, and video file analysis.
- Integrated SSDEEP, MFCC, and SSIM algorithms to compare files up to 100 MB with 2–5 second execution times using scalable pipelines and a real-time scoring dashboard.

---

## PROFESSIONAL SKILLS

**Programming Languages:** Python, SQL, JavaScript

**AI & Machine Learning:** Machine Learning, Deep Learning, Generative AI (GenAI), LLMs, RAG, Prompt Engineering, NLP

**Frameworks & Libraries:** FastAPI, LangChain, Pandas, NumPy, Scikit-learn, React.js

**Databases:** MySQL, PostgreSQL, MongoDB, OpenSearch

**Data Analytics & Visualization:** Power BI, Tableau, Splunk, Data Analysis, Dashboard Development, Business Intelligence

**Cloud & DevOps:** AWS (EC2, Bedrock), Docker, Git, GitHub, REST APIs, CI/CD

**Professional Skills:** Problem Solving, Analytical Thinking, Agile/Scrum Development, Workflow Automation, Cross-functional Collaboration

## PUBLICATION

---

**An Integrated AI Platform for Resume Analysis, Document Generation, and Intelligent Job Matching**

*IJSAT, Volume 17, Issue 1, January–March 2026*

## CERTIFICATIONS

---

**NPTEL:** Operating System Fundamentals | Database Management System | Data Structures and Algorithms using Java

**Coursera:** Google Data Analytics Professional Certificate | Google AI Essential Certificate

**Belkasoft:** Windows Forensics

**DataCamp:** Tableau & Power BI
